

Wireless Installation Hands-on Test

Find all of the information about your node!

1. What is the name of the node I'm connected to?
2. What is the mesh IP address of the node I'm connected to?
3. Who are this node's neighbors? List their mesh IP addresses, and hostnames if you can find those too.
4. Which neighbor has the best connection to this node?
5. What is the maximum number of hops (nodes) between two nodes on the network?
6. Is this mesh network connected to the Internet? If so, which nodes(s) are connected to the Internet?
7. What is the MAC address of the wireless network card of this node?
